

Happy Summer Solstice!

May you continue to bloom, grow and be nurtured in the coming months!

We at The Thermography Center are so excited for all of you to see our new website upgrade! This project has been in the works since November, 2017 and finally went live last month! It is beautiful and educational and full of so much great information! You will find material on thermography full body scan and breast screenings, holistic health, women's wellness, nutrition, natural supplements we recommend and MORE!

In addition, we now offer Comprehensive Wellness Plans! If you need extra support, guidance, or just don't know the best next steps to take once you receive your report findings, we are here to help guide you with a Customized Wellness Plan! The Plans include dietary guidelines, recipes, supplements and herbs, lifestyle and detox protocols, and practitioner referrals. Plans can be purchased for an additional cost for both breast screenings or full body scans.

Please visit our new site to learn more at www.TheThermographyCenter.com

Low Cost Breast Screening Through The United Breast Cancer Foundation and The Thermography Center continues!

Many of you have benefited greatly from the scholarships offered through The United Breast Cancer Foundation. Those of you who don't need a scholarship to help pay for the cost of your breast screening or full body scan may still want to share this helpful grant with others who are in financial need. Although the scholarships have been sporadic in past years, we are happy to share an almost 18 month consecutive run of processing scholarships for hundreds of our clients.

This is VERY exciting news! Because it means that no one will be turned away due to financial need or hardship.

Funds awarded may also be used toward the Breast Screening portion of a Full Body Scan. If awarded a full scholarship, this means that we can provide a breast screening for as little as \$80.00 and a Full Body Scan for as little as \$300.00.

The way it works:

Individuals may apply by accessing the application directly through The United Breast Cancer Foundation's website or by visiting <http://www.thethermographycenter.com/thermography-FAQ-frequently-asked-questions.html>. Detailed instructions are on the website. There is a \$5.00 fee to access the application. Once you receive an email reply from UBCF you may then make an appointment with The Thermography Center by scheduling on our website or calling us: 805.560.7602 or 310.871.5647.

It is that simple!

It has always been The Thermography Center's goal to provide affordable and safe screening for early indications of breast disease. This association, with the United Breast Cancer Foundation, provides a wider range of access to all women (and men) for preventative breast screenings. With each breast

screening clients receive complimentary tips and further options for the natural prevention and reversal of disease.

**Please continue to share the good news
with all your friends and family!!!**

Special Offers!

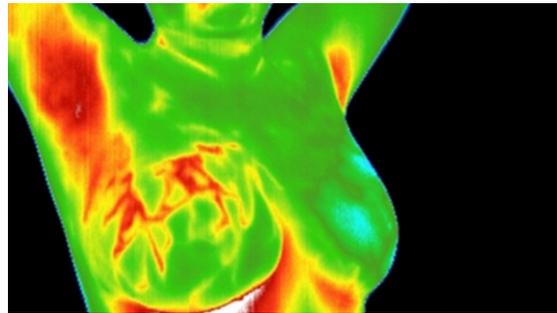

All new patients will receive a \$20.00 discount off the cost of their breast screening during the month of July! Tell your friends and family!!!

To help spread the word about our beautiful and educational new website, schedule your thermography appointment with a friend or family member during the month of July and both of you will receive \$20.00 off the cost of your breast screening or \$40.00 off your breast screening and full body scan.

What is Breast Thermography?

Breast Thermography can screen for early indications of disease in the breast. You can then halt & reverse symptoms holistically before they become life threatening.

Breaking News

Author and Lecturer Dr. Véronique Desaulniers discusses "Mammography Versus Thermography" on The Truth About Cancer.

[Link to Additional Resources](#)

Many Great News in the World of Health!

There is much to applaud in the story:

- interviews with two health care professionals - an MD and an RN - who articulate rational decisions to decline mammography. The RN is quoted: "I've been made to feel like I'm nuts for turning down the test."
- an interview with Dr. Susan Love, who discusses "an approach that's gaining traction called informed choice."
- a dismantling of the over-used and misunderstood statistic that a woman has a 1-in-8 chance of getting breast cancer in her lifetime: "But if you're 50, your chance of a cancer diagnosis in the next decade is actually closer to 1 in 42."
- the ending, quoting the MD who declines mammograms: "There isn't one right answer. What matters is that each woman makes the best decision for herself and her body."

Furthermore...

The New York Times just published on study on Chemotherapy and if it is necessary or not. Women are strongly encouraged to request a gene study in order to determine if Chemotherapy would be beneficial as part of their treatment protocol. Article below...

<https://www.nytimes.com/aponline/2018/06/03/health/ap-us-med-breast-cancer.html>

Immunotherapy is proving to be a less invasive, less harmful with little or no side effects option for treating cancer. It is amazing some of the success doctors have recently had using one's own immune defenses to treat disease! Read more..

<http://www.latimes.com/science/sciencenow/la-sci-sn-breast-cancer-immunotherapy-20180604-story.html>

There is no question that cancer is a complicated disease, and there is so much (if we have enough time and catch it early enough) we can do to heal our bodies. We can support our bodies internal environment so that it has a strong immune system, thereby creating health. Cancer cells are common occurrences in the body, however, if our immune systems are strong they are able to contain the cells. Cancer has been around forever, but only in the second half of the 20th century have the number of cancer cases skyrocketed. Contributing to this increase are the excessive amounts of toxins and pollutants we are exposed to e.g., high stress lifestyles, poor quality foods, pesticides, pathogens, and the increase in electromagnetic exposure. All weaken the immune system, thereby, altering the internal environment of the body, leaving it susceptible to cancer.

Even with the growing numbers of cancer, our bodies are strong and able to sustain health, re-balance, and heal. We see our clients change the trajectory or high risk Thermography Report findings on a weekly basis, and believe in our bodies innate ability to heal.

In closure, we strongly believe one of the main causes of the upwelling of cancer is due to the number of chemicals we are exposed to. One quick solution would be to add the Think Dirty app to their phones or researching beauty products before purchasing on <http://www.ewg.org/skindeep/users-guide-to->

skin-deep.com Think Dirty states, "it makes reading product labels simple, easy, and fun. The app also helps consumers understand what ingredients and symbols on product packaging mean. Products are rated by the Dirty Meter, a rating system based on third party non-profit science, environmental organizations, and government agencies".

Please be sure not only to check the labels on your food, use non-toxic cleaning agents, but also check the products you use on your body through the Think Dirty app or through the Skin Deep website.

Don't Forget!

Mark Your Calendars for the 46th Annual Cancer Control Society Convention. If you or your loved one has been diagnosed with cancer or you just want to stay ahead on the most progressive, alternative cancer prevention protocols, we strongly suggest you consider attending this event! We try to go every year and always come away with new information to share with our clients!
